Project Details:

- **Blog by Flask:** Built a web site for the blog using flask framework as backend and HTML, CSS, Bootstrap for the frontend and MySQL for Database. In this blog that is many functionalities like make new user and that have mail notification on particular email id. That is also some CRUD activity in blog.
 - Period: 6 June - 7 July
 - Team size: 01
- **Parking Automation with Voice Intelligence:** The main AIM of this project is reducing the traffic in the parking place through smart way and easy to interact with online Parking system. Normally we can see in the multiplexes, cinema halls, large industries, and function halls there is problem they have to go and search which line is empty and which line having place to park the vehicle, or parking then they need workers for parking in correct position it is the money consumed process. So, to avoid this problem parking automation with voice intelligence is implemented. In this project any end-user is easy to interact to online parking system and our main function is interact Alexa through. Suppose end-user need to immediately parking, so they can easily ask to Alexa and solve their problem. In this project we use JAVA, Spring Boot, cloud and MySQL.
